

c-sweep M=2/M=4 at matched total rate, all SNRs (colour = SNR, line style = rate)

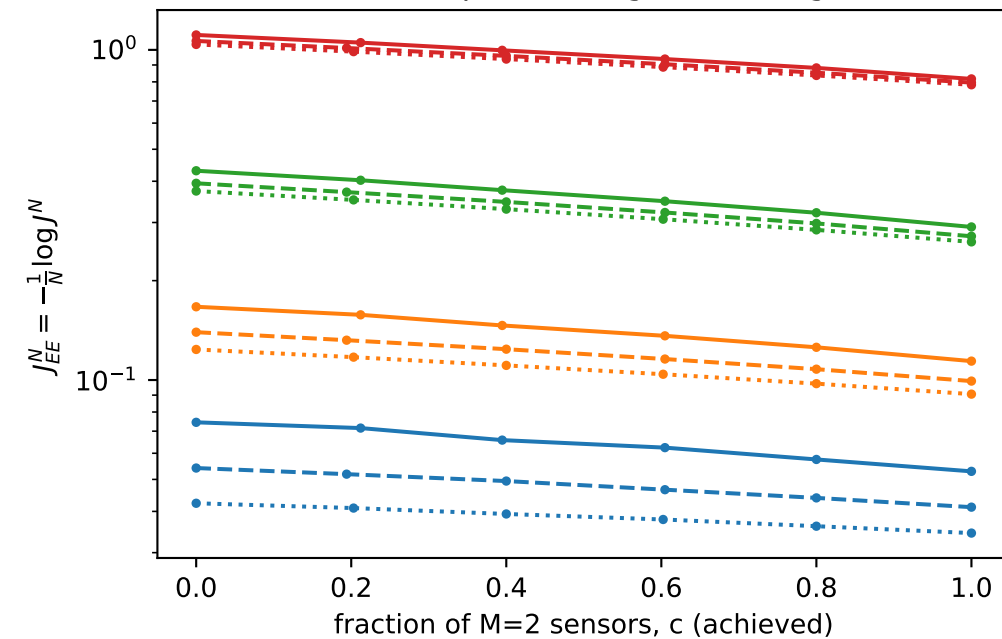

Total exponent vs c (log scale)

Heterogeneity effect (1 = pure rate reallocation)

Normalized exponent (log scale, diagnostic)

Merged view of the per-SNR figures. Colour encodes SNR, line style encodes the total-rate target; chord overlays are omitted here, panel 2 carries the exact/chord ratio instead. Endpoints are homogeneous (inside Assumption 1(iii)); interior c is outside it.
